NEXT GENERATION RISK MANAGEMENT

KEYWATCHER™ KEY MANAGEMENT

SASSI® has been integrated with the KeyWatcher™ key management system. KeyWatcher™ is a modular, scalable integrated key control and management solution that's designed for interoperability with access control and other systems including SASSI®.

With KeyWatcher™, access to the electronic key cabinet and to individual keys is under your complete control. You decide who has permission to remove each key, and with the KeyWatcher™ advanced communications capabilities, you always know who removed any key and when it was taken. It's the solution that gives you more value, more storage and more convenient accessibility to your electronic key management system.

With the KeyWatcher™ modular design, you can configure the exact components you need like key slots, card slots and lockers, with the ability to change modules where and when you need to.

Once the appropriate user profiles and key details have been entered into SASSI®, KeyWatcher™ ensures that only authorised staff are allowed access to the key cabinet and only then, to designated keys. The system automatically records when a key is used and by whom on a central database on an administrators PC.

SASSI® knows what keys a contractor requires according to the services they provide. For example, someone who is doing work on the Electrical Switch board will need the key to the switch-board. So, when that person signs in to SASSI® they will automatically be given access to the relevant key/s. Keys are available 24/7 but to authorised staff only, so there is no issue about leaving keys un-attended should the manager be off-duty or away on holiday or if this is an unmanned remote site.

• Easily identify the proper keys

• Return keys to any location

• Functional design uses less wall space

• Ergonomic design offers ease of use
